SUMMARY

Full-stack software engineer with 8+ years building customer-facing K-12 EdTech serving 1M+ users at 99%+ uptime, specializing in React, TypeScript, and Redux. Progressed from bug-fixing to leading product-agnostic micro front-end architecture, AI-powered assessment tooling, and QTI-based test and rubric platforms. Experienced tech lead who mentors engineers, drives technical strategy, and ships accessible, well-tested software across cross-functional teams.

SKILLS

- **Languages:** TypeScript, JavaScript, Java, SQL, XML
 - **Frontend:** React, Redux / Redux Toolkit, micro front-ends (MFE), SASS, CKEditor 5, jQuery, DataTables
 - **Backend & Cloud:** Node, AWS Lambda, DynamoDB, MySQL, S3, CloudFront, AWS OpenSearch, REST APIs
 - **AI:** OpenAI API integration, prompt-driven content generation, usage metering
 - **Standards & Practices:** QTI assessment standards, CI/CD, accessibility (WCAG), automated testing, code review, modular architecture
 - **Leadership:** Tech design ownership, scrum leadership, mentoring, cross-functional collaboration
-

WORK EXPERIENCE

Senior Software Engineer I

PowerSchool LLC — Remote, US

July 2021 – Present

- Overhauled the student test-taking app, migrating 32 bespoke components to PowerSchool's shared React component library. Eliminated ad-hoc CSS duplication through a shared internal style library and improved accessibility with built-in WCAG-compliant components.
- Replaced a legacy jQuery question-creation page with a React SPA (Redux Toolkit, Lambda, DynamoDB, CKEditor 5), unifying 15 question types into a single QTI-standardized editor for all Performance Matters users. Added an AI question generator (OpenAI API) that scales from 1 to 10 questions per minute, cutting config time 2–3 minutes per question. Serves 30M+ students across 5,000+ institutions.
- Transitioned to the New Solutions team, building product-agnostic micro front-ends consumed by Performance Matters and other PowerSchool applications.
- Designed "allotments," an AI credit entitlement system for per-org metered billing across a platform serving 1M+ users. Generated \$1M+ in revenue and capped exposure to uncapped OpenAI costs that average \$20K+/month per org. All AI content across the platform is tracked through this system.
- Built a React SPA companion to PowerSchool's AI chatbot for Schoology customers, letting students save interests and learning styles to drive personalized responses.
- Built a QTI-based assessment creator as a micro front-end, assembling questions into full tests with integration into host grading systems. Reduced load times and enabled the first UX update since 2014. Designed for integration into Performance Matters.
- Built rubric applications (creator, viewer, access-aware catalog) with React, Redux Toolkit, DynamoDB, Lambda, and AWS OpenSearch. Now serving Performance Matters and Schoology customers with district-level access control.
- Stepped up as acting team lead for 3 months, directing a team of 3 through a migration to PowerSchool's Neon design library (60+ components). Now front-end tech lead and epic owner for the assessment creator, delivering all projects on time and above quality bar.

Software Engineer I, II, III

PowerSchool LLC — Remote, US

May 2018 – July 2021

- Promoted 5 times in 3 years, from Associate Software Engineer through Senior Software Engineer II.
 - Cleared a 4-year bug backlog as the sole junior developer on the product, stabilizing customer-facing applications across jQuery, CSS, and Maven.
 - Built a full-stack FTP log viewer (REST APIs + DataTables UI), turning multi-day internal support data requests into self-serve access.
 - Migrated 50GB of static assets from an on-prem server warehouse to versioned S3 + CloudFront, improving data security and enabling asset versioning for resources delivered to millions of students.
 - Built accessibility and geometry test-taking tools for Performance Matters students, including a focus reader, text-to-speech, on-screen ruler, protractor, and compass. Available to all users, activated by teachers as needed.
-

EDUCATION

Full Stack Development Program

Thinkful — Atlanta, GA

May 2017 – Dec 2017

- Built 6 single-page applications covering RESTful APIs, MongoDB, Node, Express, and React.

Associate Degree in Creative Clown Arts

TnT Clown University — Tocoa, GA

2010
